SAFARI ARMCHAIR

OUTDOOR FURNITURE

POLYPROPYLENE GARDEN CHAIR Safari Armchair is a polypropylene stacking armchair, very sturdy and stable. A designer outdoor armchair from gas air moulded injected polypropylene with fibreglass. As strong as it is light and as sleek as it is versatile, the Safari Armchair is available in a range of colours and its unique design allows up to ten chairs at a time to be stored in a self-supporting stack. Its distinctive lines and high-tech production method means this polypropylene garden armchair is ideal for contract and outdoor use. The armchair's slim profile and clean silhouette make it a perfect addition to the dining areas, function hall or workspace, and its exceptional stacking capability means that when not in use it will never be under your feet. The Safari Armchair is most comfortable and perfect when it is set next to our concrete or teak tables for the outdoors. This polypropylene armchair is also perfect for indoors and very easy to clean with a gentle wash. Visit us to find out more about this polypropylene garden chair at UHS International.
